## Board of Trustees Meeting of November 17, 2021 IT Report

---

### **Navrisk Coverage Breakout**

We continue to work with our policy management software vendor (Ventiv) to breakout coverages on the property line. The requested changes will be effective for the 22/23 renewal.

### **Policy Management Software Vendors**

The IT department is exploring policy management systems. We are looking for something that allows NJSIG some flexibility when market conditions dictate immediate changes for the membership.

### **Origami Risk Pooling Committee**

Origami is NJSIG's claims management software program that is used in the commercial insurance industry as well as insurance pools. We felt that Origami was focusing more on the commercial insurance companies when new functionality was being pushed out to their clients, so we have taken action to be more involved and have a voice with new releases and functionality. This is important because we feel we can help steer the software more towards NJSIG's needs. We have also started sitting in on round table discussions with other pooling groups, and are going to be part of Origami's Insurance Risk Pool Committee that will meet regularly. Our goal is to make sure that Origami releases meet NJSIG's pooling needs and that any functionality that is part of a new release will not negatively affect the way NJSIG is currently using Origami.
