Board of Trustees Meeting of November 29, 2017 Information Technology Report

Mount Laurel Data Storage Hardware Upgrade

We are gathering information from multiple vendors for hardware for VMware storage in NJSIG's Mount Laurel office. The current storage servers have been in production for seven years and are due for an upgrade. Once the hardware is selected, the upgrade should take about one week. There will be minimal to no production down time during this time.

The current servers will be moved to the Marlboro office and used to upgrade the server there.

New Staff

We added a new Jr Data Analyst position to the department. I am very pleased to announce that Tiffani Jackson has accepted the position and will start with us on December 1st. We are very excited to have Tiffani on our team. As the software power user from the Claims Department, she worked hand in hand with the Information Technology Department during many upgrades. With Tiffani's claims experience, knowledge and hunger to learn she will be a great fit and asset to this department.

Jeff Cook
